Appl No. 09/943,232 Arndt. dated January 18, 2006 Reply to Office action of November 22, 2005

2165925009

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously Presented) A method of wireless network communication comprising: communicating over a plurality of carriers using an adaptive array antenna between at least one network access point and a plurality of clients;

monitoring at least one dedicated carrier with an omni-directional antenna for new clients seeking to associate with the network;

> detecting a new client over the at least one dedicated carrier; and associating the new client to the network.

- 2. (Previously Presented) The method of claim 1 wherein the step of communicating over a plurality of carriers communicating over orthogonal frequency division multiplexing frequencies.
- 3. (Original) The method of claim 1 wherein the step of communicating over a plurality of carriers comprises employing at least one adaptive directional antenna on the at least one access point.

Claims 4 and 5 (Cancelled).

6. (Currently Amended) An implementation for network communication comprising: at least one network access point for communicating with a plurality of clients over a plurality of carriers;

means for monitoring at least one dedicated carrier selected from the plurality of carriers for new clients seeking to associate with the network with an omni-directional antenna;

means for exchanging data with the plurality of clients with unselected carriers from the plurality of carriers employing an adaptive array antenna[[.]];

> means for detecting a new client over the at least one dedicated carrier; and means for associating the new client to the network.

Appl No. 09/943,232 Arndt. dated January 18, 2006 Reply to Office action of November 22, 2005

- 7. (Previously Presented) The implementation of claim 6 wherein the plurality of carriers comprises orthogonal frequency division multiplexing frequencies.
- 8. (Previously Presented) The implementation of claim 6 wherein the at least one network access point comprises at least one adaptive directional antenna employed for communicating over the plurality of carriers.

Claims 9-10 (Cancelled)

- 11. (Previously Presented) The method of claim 1, wherein the communicating and monitoring occur concurrently.
- 12. (Previously Presented) The implementation of claim 6, wherein the means for monitoring and the means for exchanging data operate concurrently.
- 13. (Currently Amended) An access point for operating on a plurality of frequencies, wherein at least one of the plurality of frequencies is a selected frequency and the remaining of the plurality of frequencies are unselected frequencies, comprising:

an adaptive antenna array;

a first transmit circuitry and first receive circuitry for communicating with clients associated with the access point, the first transmit and first receive circuitry coupled to the adaptive antenna array and using the unselected frequencies;

an omni-directional antenna; and

a second transmit circuitry and second receive circuitry for communicating-with elients, the second transmit circuitry and second receive circuitry coupled to the omni-directional antenna and using the selected frequency;

wherein the access point is responsive to detecting a new client on the selected frequency via the omni-directional antenna and to associate the new client; and

wherein the access point exchanges data with the clients associated with the access point using the unselected frequencies via the adaptive antenna array.

Appl No. 09/943,232 Amdt dated January 18, 2006 Reply to Office action of November 22, 2005

- 14. (Currently Amended) The access point of claim 13, wherein one of [[the]]a group consisting of the first transmit circuitry and first receive circuitry operate concurrently with one of [[the]]a group consisting of the second transmit circuitry and the second receive circuitry.
- 15. (Previously Presented) The access point of claim 13, wherein the adaptive antenna array forms at least one directional antenna.
- 16. (Currently Amended) The access point of claim 13, wherein the plurality of carriers the plurality of carriers comprises orthogonal frequency division multiplexing frequencies.
 - 17. (Cancelled)
 - 18. (Currently Amended) The access point of claim 13, wherein:

at least one of [[the]]a group consisting of the first transmit circuitry and first receive circuitry operate concurrently with at least one of [[the]]a group consisting of the second transmit circuitry and the second receive circuitry;

the adaptive antenna array forms at least one directional antenna;

the plurality of carriers the plurality of carriers comprises orthogonal frequency division multiplexing frequencies; and

the selected frequency is used for associating new clients and the unselected frequencies are used for other data transmissions.
